

Psychology

Bachelor of Science (B.S.) and Doctor of Philosophy (Ph.D.) in Psychology

or

Bachelor of Science (B.S.) and Doctor of Psychology (Psy.D.)

or

Bachelor of Science (B.S.) and Master of Science (M.S.)

Mental Health Counseling

or

**Bachelor of Science (B.S.) and Specialist (Psy.S.) in School
Psychology**

A dual admission program is available to students who are interested in pursuing a career in psychology. Successful completion of this program leads to a bachelor of science degree in psychology and either a master's degree in mental health counseling (M.S.), a specialist's degree in school psychology (Psy.S.), a doctorate in psychology (Psy.D.) or a doctorate in philosophy (Ph.D.) in clinical psychology.

The undergraduate **psychology** major emphasizes scientific research and applications to human activity. The major provides students with a solid foundation in the knowledge base of psychology, and the required practicums give students the opportunity to put into practice what they have learned.

Students will complete their undergraduate degree in psychology and continue their graduate studies at NSU's Center for Psychological Studies. Both doctoral degrees satisfy educational requirements for the practice of clinical psychology. The doctor of philosophy program also provides preparation for academic and research activities. The mental health counseling program provides education and training for those who will seek employment in such diverse settings as social service agencies, mental health clinics, hospitals, personnel offices, or schools. The school psychology program provides education and training to students preparing to become school psychologists.

Center for Psychological Studies

The Center for Psychological Studies is committed to providing the highest quality educational experience to current and future psychologists and mental health and counseling professionals. This training experience provides individuals with a sophisticated understanding of the psychological research and the highest quality mental health care. The research activities by the large, distinguished faculty are applied, focusing on pressing social and community problems.

The school serves as a training facility and research laboratory in addition to providing the highest quality services to the community. The center's state-of-the-art, 65,000-square-foot facility is at the forefront in creating a model center analogous to the successful medical school-university hospital model that integrates academic training, research, and clinical facilities.
